

EDUPOWER NORDIC INSTITUTE

Junkkari

OPERATIONAL EXCELLENCE

interview with CEO Harri Hytönen

We started to look for training because we had low productivity, a decreased customer base and a need to reduce costs. We believed Lean could be the way to address these problems, based on previous experience.

EduPower was selected for the training based on the customer oriented approach, overall cost-efficiency and content of the offer vs. the inquiry.

Three words that describe the experience working with EduPower:
Customer oriented, flexibility, commitment to value beyond the basic delivery.

We are now thinking about how to do things in a smarter way and have started implementation with Lean and Six Sigma tools in our work. We are utilizing these things.

The theoretical framework and the practical execution have been of great benefit for us. "We have not learned if we can't apply it". Throughout the training discussing and questioning was facilitated and encouraged.

Staff comments from training sessions:

"The training gave a lot of practical advices and hints. My way of thinking has clearly changed.

- Production development Engineer

"The training inspired to think about production development"

- Development manager

Case study

Customer: **Junkkari Oy**

Year: 2015

Scope: Staff training according to Lean-principles. Lean Six Sigma Green Belt

Junkkari Oy

Junkkari Oy is a Finnish supplier of agricultural and forestry machines that designs, markets and manufactures machines for sowing, transportation and forestry.
